

UNIT SECURITY

ENTRY AND EXIT PROCEDURES FOR LIVESTOCK

Loading ramp – basic principles of design

Loading ramp rules

- 🔔 Lorries must have no pigs on board, must be clean, washed and disinfected
- 🔔 The off-farm disinfectant/washing area (see diagram) must be prepared prior to each loading by the unit staff (wearing off-unit clothing) and then they must re-enter the farm
- 🔔 The lorry driver must inform a member of staff using the klaxon upon arrival
- 🔔 The lorry drivers must wash their hands and wear the over boots provided and dip the boots in the disinfectant provided
- 🔔 The lorry driver's name and vehicle number should be logged in the animal movement book
- 🔔 Farm staff must not cross the security fence line or the loading ramp
- 🔔 The loading ramp area must be thoroughly cleaned after loading each batch of pigs
- 🔔 The lorry driver must not enter the unit, under the security fencing onto the on farm ramp, to assist the loading
- 🔔 All entry and exit points should be well lit, ideally with proximity sensors
- 🔔 The sorting area and on farm loading area must be thoroughly cleaned and disinfected once the pigs have arrived or left
